

THE DEVELOPMENT OF AN AUTOMATED
AIR-TO-AIR AVIONIC/RADAR ANALYSIS SYSTEM
ON TORNADO ADV AT BAe WARTON

AUTHOR: B. LONSDALE
SENIOR FLIGHT TEST ENGINEER
BRITISH AEROSPACE DEFENCE
WARTON

DATE: JULY 1992

INTRODUCTION

This paper briefly reviews some of the requirements associated with the analysis of radar development trials on Tornado ADV (Air Defence Variant) at BAe Warton. An outline is provided of the initial analysis facility generated at the beginning of the trials phase, along with the developments which have been implemented since that time to form the current analysis facility. Finally the paper covers further improvements which are considered feasible within the ADV radar development programme.

CONTENT

1. BACKGROUND TO BAe WARTON AIR-TO-AIR AVIONICS/RADAR ANALYSIS SYSTEM
2. AIR-TO-AIR VS OTHER FLIGHT TEST ANALYSIS REQUIREMENTS
3. THE INSTRUMENTED RANGE
4. ADV RADAR DEVELOPMENT FLIGHT TEST INSTRUMENTATION FIT
5. REVIEW OF ANALYSIS ACTIVITIES
6. INITIAL ANALYSIS CAPABILITY
7. ANALYSIS SYSTEM DEVELOPMENTS AND CURRENT CAPABILITIES
8. FUTURE SYSTEM ENHANCEMENT REQUIREMENTS
9. RÉSUMÉ
